Question: What grade do you expect to get in this course?

B+ A-

B+

A- or B+ depending on FInal Exam Grade

C

A-/B+

A or B

Question: The best thing about this course was:

The coast trip. Also, the films shown in class showed phenominal footage

The trip to the coast.

The hands on experience in the field trip

Field trip

I really enjoyed the field trip to the coast! It helped me to better understand the textbook material and was a great experience overall. I also thought the textbook provided really great information that helped me to understand marine biology more in depth.

Dr. Polozov is a very passionate, knowledgeable teacher and has a lot of information to offer. The information itself is very interesting and the wealth of knowledge presented to us is great!

Question: One thing I would change about this course would be:

Some more lectures. By the end of the semester, there was no lectures/questions

I would change the timing of the coast (or the material) so that we could have a test that was only on the things that we learned on the coast. This would have made it easier to balance out the difficulty of the second test.

A longer Field Trip if at all possible

N/A

I would have liked the trip to have been after an exam. It was hard to learn material in class, then go to the coast, then remember the earlier material for the exam.

Take a small amount of time each class to address test-specific concepts. There are so many concepts we learn about that are extremely important, but there is such a large amount of information that is presented that it is hard to know what to focus on for tests, as it simply is not possible to cover every single thing ever learned before an exam.

Question: Other Comments:

I greatly enjoyed this course. Although it was difficult, that is natural of a 400 level bio course. Dr. Polozov is greatly qualified for this course and truly knows and is passionate about the material.

One of my favorite classes this semester! Had a really great time on the field trip and learning more about this subject.
